This book provides a comprehensive overview of the socioeconomic evaluation of drug therapy, focusing on the methods and techniques used to assess the cost-effectiveness of drug interventions.

The book is divided into three parts.

1. The first part provides an overview of the principles of socioeconomic evaluation, including the concepts of cost-effectiveness, cost-utility, and cost-benefit analysis.
2. The second part discusses the methods and techniques used to conduct socioeconomic evaluations, including decision-analytic modeling, cost-effectiveness analysis, and cost-utility analysis.
3. The third part presents case studies of socioeconomic evaluations of drug therapy in a variety of therapeutic areas, including cardiovascular

disease, cancer, and diabetes.

This book is a valuable resource for researchers, policymakers, and clinicians who are involved in the evaluation of drug therapy.
